The gases used during bottling

(carbon dioxide, argon and nitrogen) may be replaced by the words "bottled in a protective atmosphere" or "bottling may be carried out in a protective atmosphere".

"liqueur de tirage" and "liqueur d'expédition" may be mentioned on their own without listing their components.

EXAMPLE OF A LIST OF INGREDIENTS:

Ingredients: grapes, acidity regulator (L-tartaric acid), antioxidant (L-ascorbic acid), preservatives (sulphites), stabilisers (gum arabic), stabilisers (carboxymethylcellulose and/or metatartaric acid and/or mannoproteins).

IN WHICH FORM can it appear?

→ On the back label

Via a QR CODE (electronic labelling)
Platforms (e.g. u-label, vin.co, dansmabouteille, etc.)
have already been developed to generate QR codes,
which can be added to labels.

The collection or tracking of user data will not be authorized, and the list must be kept separate from any other information for commercial purposes.

The energy value will be the only mandatory nutritional declaration to appear on the label. It may be expressed using the symbol "E" (for energy), in kJ and kcal per 100 mL.

The full nutritional declaration (fat, saturated fatty acids, carbohydrates, sugars, proteins, salt) will be available electronically. There will be two options for calculating these values:

→ A calculation using conversion

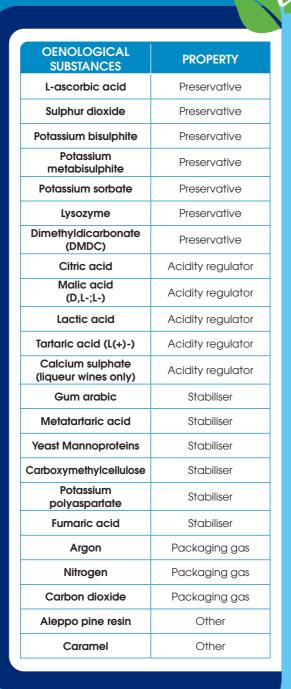

coefficients (Annex XIV of Regulation (EU) 1169/2011) based on the alcohol and sugar content of the wines.

The use of average data established and accepted by the sector.

LIST OF

23 ADDITIVES AUTHORISED

IN THE EUROPEAN UNION

NEW LABELLING REGULATION

ALTERNATIVES
TO REACH A TARGET

EU labelling regulation 2021/2117 marks a turning point in the wine industry by paving the way for natural oenological alternatives to traditional additives. With this in mind, there is a short summary of these regulations, followed by a list of oenological solutions designed to meet these new requirements while improving the quality of wines. Bioprotection, natural acidification, chitosan and yeast-derived products - find out how you can replace these additives while significantly optimising your vinification process.

European Regulation 2021/2117 on the labelling of wines and alcoholic beverages will come into force on 08 December 2023 and will only apply to wines produced after that date. This regulation requires additional information to the rules already in force.

LIST OF INGREDIENTS what should appear?

- Raw matters (grapes, sugar or concentrated must if added)
- Additives associated with their processing properties (see the full list with their properties overleaf)
- Allergenic processing aids shown in bold

ADDITIVES ARE LISTED IN DESCENDING ORDER OF WEIGHT WHEN THEY REPRESENT MORE THAN 2% OF THE FINISHED PRODUCT:
THE ORDER IS THEREFORE IRRELEVANT FOR ADDITIVES.

Processing aids containing additives to preserve/stabilise the product itself will not be affected.

- Sulphur dioxide (E220),
 potassium metabisulphite (E224)
 and potassium bisulphite (E228) may be grouped together under the term "preservatives (sulphites)".
- "Acidity regulators" and "stabilisers" categories: similar or substitutable products may be indicated in the list of ingredients using the expression "contains... and/or" followed by a maximum of three additives, at least one of which is present in the final product.

ZERO ADDITIVE ALTERNATIVES TO PRESERVATIVES:

COMBATING OXIDATION

	ALTERNATIVES	BENEFITS
	IOC CALYPSO™ Metschnikowia pulcherrima yeast	Bioprotection and biorevelation of aromas
HARVESTING	ESSENTIAL ANTIOXIDANT™ Gallic tannin	Oxygen-sacrificing tannin Inhibition of laccase activity
	FULLPROTECT™ Specific inactivated yeast and gallic tannin	Limits primary and secondary oxidation
VINIEICATION	GLUTAROM EXTRA™ Specific inactivated yeast with guaranteed glutathione content	Enhances the oxidative stability of wines

ZERO ADDITIVE ALTERNATIVES

FOR PRESERVATION AND MICROBIOLOGICAL STABILISATION

	ALTERNATIVES	BENEFITS
HARVESTING	IOC GAIA™ Metschnikowia fructicola yeast	Microbiological bioprotection Biosanitation of equipment
VINIFICATION	IOC BE THIOLS™ IOC BE FRUITS™ IOC BE FRESH™ Saccharomyces cerevisiae yeast	Preservation of the level of active SO ₂ by limiting its combination
VINIFI	MAXIFLORE™ EXTRAFLORE™ Oenocossus Oeni bacteria	Occupation of the environment and early stabilisation of musts and wines

ZERO ADDITIVE ALTERNATIVES TO

ACIDITY REGULATORS

	ALTERNATIVES	BENEFITS
HARVESTING	IOC BOREAL™ Lachancea thermotolerans yeast	Natural production of lactic acid

ZERO ADDITIVE ALTERNATIVES TO SEYAL GUM AND MANNOPROTEINS: STRUCTURING, COATING

AND REFINING

	ALTERNATIVES	BENEFITS
VINIFICATION	IOC R9008™ Saccharomyces cerevisiae yeast	Release of coating polysaccharides during fermentation
	EDIFYS RILIEVO™ Inactivated yeasts and specific autolysates	Shapes the attack and mid-palate of red wines around sensations of volume and freshness
	EDIFYS INCISO™ Inactivated yeasts and specific autolysates	Reduces the bitter and astringent finish of red wines as they mature
	FEELWOOD™ Wood chips	Increased sweetness
AGING	SPHERE BLANC™ Specific inactivated yeasts	Fullness, roundness and sensory stabilisation of white wines
	SPHERE ROUGE™ Specific inactivated yeasts	Volume, structural quality and sweetness of red wines
	ESSENTIAL OAK SWEET™ Ellagic tannins	Increased fullness
	ESSENTIAL OAK BARREL™ Ellagic tannins	Increased volume
	PRIVILEGE BLEU™ Ellagic tannins	Increased finesse
	PRIVILEGE NOIR™ Ellagic tannins	Increased structure

ZERO ADDITIVE ALTERNATIVES TO VEREK GUMS:

COLOUR STABILISATION

4	ALTERNATIVES	BENEFITS
VINIFICATION	FULLCOLOR™ Ellagic and proanthocyndic tannins, yeast polysaccharides	Long-lasting stabilisation of the colouring matter
	IOC REVELATION TERROIR™ Saccharomyces cerevisiae yeast	Increased colour intensity
	VOLUTAN™ Grape tannin	Colour stabilisation through the formation of tannin-anthocyanin complexes
AGING	ESSENTIAL OAK BARREL™ Ellagic tannins	

ZERO ADDITIVE ALTERNATIVES

FOR TARTARIC AND CALCIUM STABILISATION

	ALTERNATIVES	BENEFITS	
	DUOSTAB™ Potassium bitartrate and calcium tartrate		
AGING	MICRONISED CREAM OF TARTAR	Cold treatment Inductors of the crystallisation of tartaric salts	
	CALCIUM TARTRATE
