

INOGUM™ 300

STABILISATION

↓ OENOLOGICAL APPLICATIONS

INOGUM™ 300 is a filtered and sulphited gum arabic solution.

The gum arabic used comes from gum Kordofan, a gum derived from the Acacia Verek tree, which is the most effective protective agent for colloidal solutions.

Gum Arabic is used as a preventive treatment:

- Precipitation of unstable colouring matters,
- Copper and iron breakage,
- Tartaric precipitation to reinforce the action of METATARTRIC ACID or carboxymethyl cellulose.

↓ INSTRUCTIONS FOR USE

INOGUM™ 300 must be added to clarified wines before bottling.

The use of a dosing pump is recommended.

It is recommended to postpone any other addition of finishing product for at least 48 hours to avoid interactions and the risk of precipitation.

↓ DOSE RATE

- 4 to 10 cL/hL.

Legal dosage limit: 30 g/hL, i.e. 10 cL/hL.

NB: This dosage limit is cumulative and applies to the use of all products containing gum arabic throughout the process.

↓ PACKAGING AND STORAGE

- 1 L, 5 L, 22 kg, 1100 kg

Store in a dry, well-ventilated, odour-free place at a temperature between 5 and 25°C.

Once opened, the product must be used quickly.
