

SULFIVIN™ A 600

SULFUROUS PRODUCTS

Maximum legal doses according to Annex 1B of Regulation EC 606/2009.

↓ OENOLOGICAL APPLICATIONS

SULFIVIN™ A 600 is an ammonium bisulphite solution at 600 g/L of SO₂

SULFIVIN™ A 600 is applied to the harvests:

- On must: In the must reception tank, to prevent oxidasic casse and all microbial alterations.
- For red wines: At vatting, during crushing for extracting and fixing colouring matter.

SULFIVIN™ A 600 has the following properties:

- It prevents the development of microbic agents via its antiseptic role.
- It is a selective factor for yeasts by limiting the development of undesirable yeasts.
- By activating an antioxidant it plays a preventative role against oxidasic casse.
- It facilitates colour extraction by promoting extraction of anthocyanins contained in the skin.
- It enables colour fixation in red wines.

↓ INSTRUCTIONS FOR USE

SULFIVIN™ A 600 addition must be followed by vigorous mixing. It is recommended to avoid putting **SULFIVIN™ A 600** in contact with metallic objects (iron, copper or aluminium).

↓ DOSE RATE
